ABSTRACT

The various schemes and facilities provided by the government to the government employees are very beneficial. However, availing these facilities requires a long and tedious process. The facility we focused on is the Central Government Health Scheme (CGHS). This scheme provides comprehensive medical care to the Central Government employees and pensioners enrolled under the scheme. We aim to make a small aspect of this scheme more easily accessible to the employees. We created a website for the central government employees which provides an online form for reimbursement of their hospital bills and for memo requests.

The features of our website are:

- 1) Memo Request Form
- 2) Reimbursement of Bills
- 3) Check Availability of Medicines

TECHNOLOGIES / LANGUAGES USED

- 1) Visual Studio
- 2) XAMPP SERVER
- 3) HTML
- 4) CSS
- 5) BOOTSTRAP
- 6) Javascript
- 7) PHP
- 8) MySQL

FEATURES

INDEX PAGE

1] Navigation Bar: We have created a horizontal navigation bar and it includes the following features :

- a) **Home:** This is for the homepage of our website.
- b) **Dashboard:** User is redirected to the official website where the statistical data related to wellness center, card holder, appointments, etc will be displayed.
- c) **Charts:** User is redirected to the official website where a graph and pie chart of total number of registrations is displayed.
- d) **Maps:** User is redirected to the official website where all the government wellness centers in India are displayed on a map.
- e) **About:** User is redirected to a link that gives all the information regarding the reimbursement form.

2] The three main features :

The three main features are displayed on the frontpage with a login option for each. These three features are connected to a

database named “project” and each features has a table for it in which the data is stored or data is retrieved.

3] User Authentication: This feature allows only employees who have been provided an account to sign in.

We created a database named “user” and in this database we created a table “user_login” in which there are two attributes “email” and “password”.

We have used php language for authentication and the user’s email address and password is stored at the backend in xampp server.

?>
```

MEMO REQUEST

- a) This is a form required to be filled by the user if he/she or family member (wife, daughter, son) wants to take medical treatment from any private hospital. This memo will be accepted by the private hospitals only till four weeks after submission.
- b) This form asks to fill the following parameters: First name, Last name of the employee, card type(retired, working, other), Beneficiary ID provided by the government to each employee, employees relation with patient, age of the patient, gender, and symptoms.
- c) When the employee fills all the details and clicks on the “Confirm Request” button the data is saved at the backend.

We have created a database named as “project” in which we have created a table “memorequest_table”. We used php language to connect this form with the database. So, all the information filled by the employee will be stored in “memorequest_table”.

- d) The employee will receive an automatic mail regarding the status of the form.

Snapshot:

The image shows a web form titled "MEMO REQUEST FORM" on a blue background. The form includes several input fields and a confirmation button. At the top, it states "This memo is valid For 4 weeks". The fields are arranged in two columns: "First Name" and "Last Name" in the first row; "Card Type" (a dropdown menu) and "Beneficiary Id" in the second row; "Relation With Patient" and "Age of Patient" in the third row. Below these is a row with radio buttons for "Male" and "Female", with "Female" selected. A larger text area for "Enter Symptoms Observed in Patient" follows. At the bottom, there is a checkbox for "I accept the terms" and a "Confirm Request" button. A footer note provides a toll-free number for 24x7 service.

REIMBURSEMENT FORM

- a) After the employee or his family takes the treatment from a private hospital then the employees get reimbursement of money from the government.
- b) For this the employee is supposed to fill “Employee Details”, “Employee Account Details” and “Patient’s Details”.
- c) When the employee fills all the details and clicks on the “Submit” button the data is saved at the backend and the user is taken back to the main page.

We have created a database named as “project” in which we have created a table “reimbursement_table”. We used php language to connect this form with the database. So, all the information filled by the employee will be stored in “reimbursement_table”.

- d) The employee will receive an automatic mail regarding the status of the form.

AVAILABILITY OF MEDICINES

- a) This displays a table which shows the details of the medicines provided by the government where each medicine has a unique ID and whether that medicine is provided by the government or not.
- b) This table consists of the following columns:
Medicine name, medicine type, medicine ID, price and status.
- c) We created a table “medicine_table” and using php language we extracted the data from this table and presented it in the form of a table on frontend.

ADMIN SIDE

Admin side will be opened only with email address:

admin@gmail.com (first level member: will get pending forms)

higherauth@gmail.com(second level member: will display passed over forms)

Here, the admin will decide whether to accept or to pass it over to higher members or to reject the requests(memo request or reimbursement bill request) i.e he /she will validate the form.

He/she will check the employee's details and whether or not the attached bills are proper or not.

Clicking on the validate button will approve the form and send the employee approval mail.

Clicking on the Pass Over button will send the form to next level admin and notify the employee.

Clicking on the Reject button will reject the form and notify the employee.

$connection-> close();  
  
$user=(isset($_GET['user'])?$_GET['user']:$_SESSION['user']);  
$_SESSION=$user;  
$_SESSION['id']=$id;
```

Conclusion:

We have made it easier for the central government employees to avail the medical facilities provided by the government.

By creating this website, we made the system easier and more efficient by making the forms available online.

The online verification of forms will also make the process less tedious.
